

Alvaro Souza Junior – Obrien's do Brasil

Mechanical Engineer, D.Sc. Environmental Planning. Since 1991 has been working as consultant in Risk Analysis and Management, and Emergency Planning, with projects developed for several companies of chemical, manufacturing, infrastructure, mining, ports and oil & gas sectors. These projects include qualitative and quantitative risk assessments, risk management programs and emergency response plans, in particular oil spill response plans. Has also participated as a safety specialist in environmental audits. Through UFRJ (Federal University of Rio de Janeiro), he was consultant of the Brazilian Ministry of the Environment and participated in the workgroups responsible for the proposals of Brazilian regulations concerning oil spill response planning (Facility Response Plans - PEIs, Area Plans and the National Contingency Plan). Lecturer at the MBA in Environmental Management and Sustainability at Getulio Vargas Foundation (FGV).
